DESIGN AND INNOVATION PROJECT
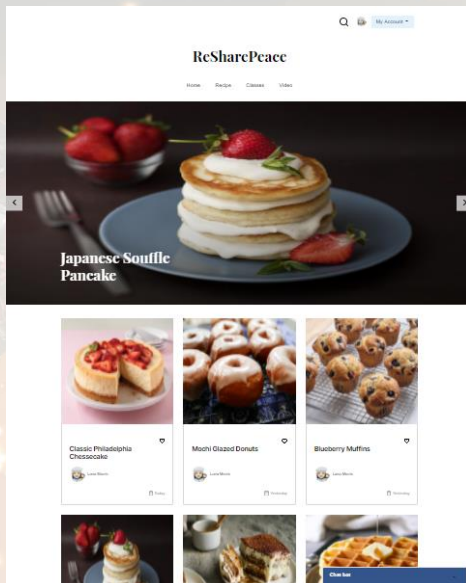

ReSharePeace

Abstract

Learning how to cook online is the new norm in 2020 and is becoming increasingly popular especially for those stuck at home. There are numerous channels on Youtube where Youtubers share their recipes and teach viewers how to cook.

We want to create a platform where users can not only upload and exchange recipes, they can also host or join a live class where they can interact with each other in real time.
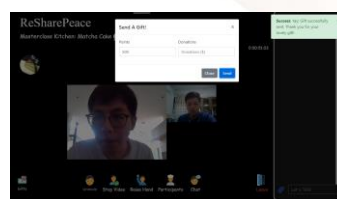

Methadology

Users can set up their own profile page and upload their recipes.

They can also view other user's profiles and search for new recipes.

With our own server and video call function, users can also upload or schedule a class which can be joined through the user's profile.

Teachers are able to earn points through donations by their students.

Students can earn points by joining livestreams of other users

The points accumulated can be used to redeem promocode or vouchers for items such as kitchenware or ingredients
